What I see is the strong delusion stated in Second Thessalonians which causes them to believe the Lie of "Evolution" so fervently that they simply cannot put what they believe to be "science" to any test of truth. No mammals other than one bat species lived in the Hawaiian Islands when the first human settlers arrived; similarly, many other kinds of plants and animals were absent.

A good example is provided by the mammalian populations of North and South America. Another possibility is that certain species are adapted to very stable areas, while others are adapted to unstable areas. The fact that some male breast tissue has been known to lactate indicates that these anatomical features still function as originally designed. Some may be the chance results of history.

City Why? The 'age' given to these birds is the same as the dinosaurs they are fo

or Register to save! Scientists call such structures homologies and have concluded that they are best explained by common descent.
